**PLENUM FAN**

**With Backward Curved Wheels**

# BNC Q 250/280

## PLENUM FAN with Backward Curved Wheels

Kruger Ventilation Industries Asia Co., Ltd. certifies that the BNC Series shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and comply with the requirements of the AMCA Certified Ratings Program.

\*Kruger Ventilation Industries Asia Co., Ltd.

# TECHNICAL SPECIFICATION

## Wheel

The wheels of BNC 250/280 have backward curved blades manufactured in hot rolled steel with polyester power coating finish.

## Shaft

Shafts are manufactured from C45 carbon steel using an automatic process for positioning and cutting of the keyways. All dimensional tolerances of the shaft are fully checked to ensure a precision fit. All shafts are then coated with an anti-corrosion varnish after assembly.

## Bearing

Bearings used are either deep groove ball bearings with an adapter sleeve, or spherical roller bearings sealed at both sides for different duty applications.

The bearings are lubricated for life and maintenance-free. If relubrication is necessary, it is recommended to use lithium base grease suitable for all temperatures within the operation limits.

## Balancing Quality

- All wheels are statically and dynamically balanced to ISO 1940 and AMCA 204-G2.5 standards.
- All fans, after assembly, are also trim-balanced to ISO 1940 and AMCA 204-G2.5 standards.
- Other balancing grades, apart from G2.5, are available upon request.

## ACCESSORIES

### Inlet Guard

Inlet guards may be a requirement in some industrial safety regulations. This is available upon request.

## MOTOR SELECTION

The power curves shown on each performance graph represents the absorbed power at the shaft of the fan measured in kW.

To determine the power of the motor to be installed, a correction factor should be applied to compensate for the transmission loss.

# PERFORMANCE

The air performance data shown on the fan curve is derived from tests conducted in accordance with AMCA Standard 210 Fig 15 installation Type A (free inlet and free outlet conditions).

Ratings refer to standard air density with the total pressure as a function of the air volume, using logarithmic scale.

It is essential that, the same installation type and test standards are always used, when comparing fan performance.

The fan FEG is classified in accordance with ISO 12759/AMCA 205.

## Fan Efficiency Grades (FEG) for Fans without Drives (SI) – ISO 12759/AMCA205

## NOISE

The noise levels shown on each diagram refers to the sound power, "A-weighted" values and the data are obtained at the outlet side from the tests conducted in accordance to AMCA 300. The noise levels are determined as follows:

- ✓ Sound power level – ("A" scale:  $L_w$  (A) as catalogue.
- ✓ Octave band spectrum:  $L_w = L_w(A) + L_w \text{ rel. dB}$  (refer to Kruger for more details).
- ✓ Sound pressure level:

a) Free field

$$L_p(A) = L_w(A) - (20 \log_{10} d) - 11$$

b) Room conditions

$$L_p(A) = L_w(A) - (20 \log_{10} d) - 7$$

Where  $d$ =distance of fan (m)
